This data looks at the overall locations of the California Red-legged Frog (rana draytonii) that are suitable within Ventura County. These locations meet these criteria:

1. Within Ventura River Watershed
2. Within 500 feet of a stream
3. Outside city boundaries
4. Is in open space
5. In Palustrine Vegetation
6. 200 feet away from roads

This criteria allows for a suitable environment for the red-legged frog, and can take the species away from being labeled as federally threatened. All data was collected and analyzed by volunteer conservation biologists in the Ventura County Area.
